European Technical Assessment

ETA-10/0358 of 17 October 2016

English translation prepared by DIBt - Original version in German language

General Part

Technical Assessment Body issuing the European Technical Assessment: 
Deutsches Institut für Bautechnik

Trade name of the construction product 
Carl Stahl Wire Ropes I-SYS

Product family 
Prefabricated stainless steel wire ropes with end connectors

to which the construction product belongs

Manufacturer 
Carl Stahl ARC GmbH
Siemensstraße 2
73079 Süssen
DEUTSCHLAND

Manufacturing plant 
Carl Stahl ARC GmbH
Siemensstraße 2
73079 Süssen
DEUTSCHLAND

This European Technical Assessment contains 
13 pages including 9 annexes which form an integral part of this assessment

This European Technical Assessment is issued in accordance with Regulation (EU) No 305/2011, on the basis of 
European Assessment Document (EAD) 200001-00-0602

This version replaces 
ETA-10/0358 issued on 8 September 2016
The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.
Specific part

1 Technical description of the product

The construction products are prefabricated high-strength stainless steel wire ropes with appropriate end connectors and the trade name "Carl Stahl Wire Ropes I SYS".

Drawings of the wire ropes with end connectors as well as their essential dimensions are given in the Annexes to this European technical assessment.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The intended use comprises all typical structural applications of stainless steel wire ropes taking into account the national provisions of the Member State applicable for the location where the product is incorporated in the works.

The wire ropes with end connectors are intended for the use in structures with static or quasi-static loads according to EN 1990:2002, where no verification of fatigue relating to EN 1993-1-9:2005 is necessary.

The installed wire ropes with end connectors shall be accessible (in order) to facilitate replacement of individual components at any time.

The performances given in Section 3 are only valid if the prefabricated high-strength stainless steel wire ropes with appropriate end connectors are used in compliance with the specifications and conditions given in Annex A and Annexes B1 to B7.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the prefabricated high-strength stainless steel wire ropes with appropriate end connectors of at least 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

3.1.1 Characteristics of the product

3.1.1.1 Wire ropes

The wire ropes mentioned in section 1 shall correspond to EN 10264-4:2002 as well as to the series of the standards EN 12385. In addition the indications in section 3.1.1.2 as well as Annexes B2 to B7 shall be taken into account.

3.1.1.2 End connectors (Fork end connectors and threaded end connectors, turnbuckles)

For the product characteristics of the end connectors the indications in Annex B3 apply.

The dimensions shall correspond to the indications in Annexes B4 to B7. The threads shown in Annexes B4, B6 and B7 are metric ISO threads M 10 to M 36. The dimensions and tolerances not indicated in Annexes B4 to B7 shall correspond to the indications laid down in the technical documentation\(^1\) to this European technical assessment.

The end connectors shown in Annexes B4 to B7 may be used for open spiral strands and strand ropes according to the indications given in Annexes B2 to B7.

---

\(^1\) The technical documentation to this European technical approval is deposited with Deutsches Institut für Bautechnik and, as far as relevant for the tasks of the approved bodies involved in the attestation of conformity procedure is handed over to the approved bodies.
3.1.3 Pins for fork end connectors
The indications given in Annexes B3, B5 and B7 apply.

3.1.4 Durability

3.1.2 Performance

<table>

</tr>
</tbody>
</table>

The components of the tension rod system satisfy the requirements for performance class A1 of the characteristic reaction to fire, in accordance with the provisions of EC decision 96/603/EC (as amended).

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 200001-00-0602 the applicable European legal act is: Decision 1998/214/EC.
The system to be applied is: 2+

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 8 September 2016 by Deutsches Institut für Bautechnik

Uwe Bender
Head of Department

Stöhr
Annex A

A.1 Assumptions concerning design

The design is carried out according to EN 1993-1-11:2006. The design values of resistance given below are used for design. The loading is static or quasi-static according to EN 1990:2002 without need of verification of fatigue relating to EN 1993-1-9:2005. The dimensions, tolerances, material properties and thread engagements stated in this European technical assessment are observed. The design is carried out by a designer of the structure experienced in the field of steel structures.

Design tension resistance of the wire ropes with end connectors

The design value of the tension resistance $F_{Rd}$ of the wire ropes including the end connectors shall be determined as follows:

$$F_{Rd} = \frac{F_{uk}}{1.5 \cdot \gamma_R}$$

Where:

$F_{uk}$ = $F_{\text{min} \cdot k_e}$

characteristic value of the breaking strength of the wire ropes

$F_{\text{min}}$: minimum breaking force according to Annex B2

$k_e$: loss factor according to Annex B2

$\gamma_R = 1.0$

The value given for the partial safety factor $\gamma_R$ is a recommended value. It should be used in cases where no values are given in national regulations of the Member State where the wire ropes with end connectors are used or in the respective National Annex to Eurocode 3.

Resistance of pins

The resistance of the pins of the fork end connectors is already covered by the tension resistance $F_{Rd}$ of the wire ropes with end connectors (as before) if the thickness of the gusset plate is according to the indications in Annexes B5 and B7.

A.2 Assumptions concerning Installation

The installation is carried out such that the wire ropes with end connectors are accessible for repair or maintenance at any time.

The installation is only carried out according to the manufacturer’s instructions. The manufacturer hands over the assembly instructions to the assembler. From the assembly instructions it is followed that, prior to installation, all components of the wire ropes with end connectors shall be checked for their perfect condition and that damaged components shall not be used.

By using end connectors consisting of threaded end connector, turnbuckle and fork end connector with thread (see Annex B1) the threaded end connectors as well as the fork end connectors with thread are screwed in to the turnbuckles with a minimum thread engagement corresponding to the dimension “c” according to Annex B6.

The responsible assembler attests by notation that all connections with threads were checked concerning the keeping of the minimum thread engagements.

The conformity of the gusset plates and the installed wire ropes with end connectors with the provisions of the European technical approval is attested by the executing assembler.
A.3 Indications to the manufacturer

The manufacturer shall ensure that the information on the specific conditions is given to those who are concerned. This information may be given by reproduction of the European technical assessment.

In addition all essential installation data shall be shown clearly on the package or on an enclosed instruction sheet, preferably using illustration(s).

The wire ropes with end connectors shall be packaged and delivered as a complete unit only.
